

## LTM8061-4.1/LTM8061-4.2/ LTM8061-8.2/LTM8061.4 32V, 2A $\mu$ Module Li-Ion Battery Charger

### DESCRIPTION

Demonstration circuits 1645A-A, 1645A-B, 1645A-C and 1645A-D feature the LTM8061, a 32V, 2A  $\mu$ Module<sup>®</sup> Li-Ion battery charger. Operating from a 6.5V to 32V input source, the 1645A-A and 1645A-B demo circuits charge single cell Li-Ion batteries to float voltages of 4.1V or 4.2V respectively. The 1645A-C and 1645A-D demo circuits operate from a 12V to 32V input source, and charge dual cell Li-Ion battery packs to float voltages of 8.2V or 8.4V. JP1 turns the

converter on or off. JP2 allows for easy selection of C/10 or timer charge termination. The LTM8061 datasheet must be read in conjunction with this demo manual for working on or modifying the demo circuit 1645A.

**Design files for this circuit board are available at <http://www.linear.com/demo>**

### PERFORMANCE SUMMARY

**Table 1. Typical Specifications of the Demoboard (T<sub>A</sub> = 25°C)**

Input Supply Range	6.5V to 32V (-A and -B), 12V to 32V (-C and -D)
Typical Output Current Limit for All Versions	2A
Float Voltage Accuracy	4.08V to 4.12V (-A), 4.18V to 4.22V (-B) 8.16V to -8.24V (-C), 8.36V to 8.44V (-D)

### QUICK START PROCEDURE

Demonstration circuits 1645A-A, 1645A-B, 1645A-C and 1645A-D are easy to set up to evaluate the performance of the LTM8061-4.1, LTM8061-4.2, LTM8061-8.2, LTM8061-8.4.

Refer to Figure 1 for proper measurement and equipment setup.

#### DC1645A-A and DC1645A-B

Follow the procedure below for demo circuits 1645A-A and 1645A-B

1. Jumper and Power Supply Setting:

JP1 = ON    PS1 = OFF

JP2 = C/10    PS2 = OFF

2. Turn on PS2 and slowly increase the voltage to 2.7V while monitoring the current into the BAT pin. If the current is less than 5mA, turn on PS1 and increase voltage to 12V.
3. Verify that the battery charging current,  $I_{BAT}$ , is between 250mA and 350mA. The CHRG LED should be on and the FAULT LED should be off.
4. Increase PS2 until  $V_{BAT}$  is 3.6V. Verify the input current,  $I_{IN}$ , is between 700mA and 850mA, the battery current,  $I_{BAT}$ , is between 1.775A and 2.225A and that the CHRG LED remains on.
5. Increase PS2 until  $V_{BAT}$  is 4.3V. Verify the battery charging current,  $I_{BAT}$ , is less than 5mA and the CHRG LED is off.
6. Decrease PS2 until  $V_{BAT}$  is 3.9V. Verify the battery current,  $I_{BAT}$ , is between 1.775A and 2.225A and the CHRG LED is on.
7. Decrease PS2 until  $V_{BAT}$  is 3.6V. Connect a 10k resistor from RNG/SS to ground. Verify the charging current,  $I_{BAT}$ , is between 850mA and 1.0A. Verify the voltage at  $V_{RNG/SS}$ , is between 450mV and 550mV. Remove the 10k resistor.
8. Set JP1 to OFF. Verify the charging current,  $I_{BAT}$ , is less than 5mA and the FAULT LED and the CHRG LED are off.

9. Set JP1 to ON. Connect a jumper from the NTC pin to ground. Verify the charging current,  $I_{BAT}$ , is less than 5mA and the FAULT LED and the CHRG LED are on.
10. Remove the jumper from NTC to ground. Verify the charging current,  $I_{BAT}$ , is between 1.775A and 2.225A, the FAULT LED is off and the CHRG LED is on.
11. This concludes the test for the A and B versions. Turn off PS1 and PS2.

#### DC1645A-C and DC1645A-D

Follow the procedure below for demo circuits -C and -D

1a. Jumper and Power Supply Setting:

JP1 = ON    PS1 = OFF

JP2 = C/10    PS2 = OFF

- 2a. Turn on PS2 and slowly increase the voltage to 5.4V while monitoring the current into the BAT pin. If the current is less than 5mA, turn on PS1 and increase voltage to 12V.
- 3a. Verify that the battery charging current,  $I_{BAT}$ , is between 250mA and 350mA. The CHRG LED should be on and the FAULT LED should be off.
- 4a. Increase PS2 until  $V_{BAT}$  is 7.2V. Verify the input current,  $I_{IN}$ , is between 1200mA and 1700mA, the battery current,  $I_{BAT}$ , is between 1.775A and 2.225A and the CHRG LED remains on.
- 5a. Increase PS2 until  $V_{BAT}$  is 8.6V. Verify the battery charging current,  $I_{BAT}$ , is less than 5mA and the CHRG LED is off.
- 6a. Decrease PS2 until  $V_{BAT}$  is 7.8V. Verify the battery current,  $I_{BAT}$ , is between 1.775A and 2.225A and that the CHRG LED is on.
- 7a. Decrease PS2 until  $V_{BAT}$  is 7.2V. Connect a 10k resistor from RNG/SS to ground. Verify the charging current,  $I_{BAT}$ , is between 800mA and 1.0A. Verify the voltage at  $V_{RNG/SS}$ , is between 450mV and 550mV. Remove the 10k resistor.

### QUICK START PROCEDURE

- 8a. Set JP1 to OFF. Verify the charging current,  $I_{BAT}$ , is less than 5mA and the FAULT LED and the CHRГ LED are off.
- 9a. Set JP1 to ON. Connect a jumper from the NTC pin to ground. Verify the charging current,  $I_{BAT}$ , is less than 5mA and the FAULT LED and the CHRГ LED are on.
- 10a. Remove the jumper from NTC to ground. Verify the charging current,  $I_{BAT}$ , is between 1.775A and 2.225A, the FAULT LED is off and the CHRГ LED is on.
- 11a. This concludes the test for the C and D versions. Turn off PS1 and PS2.

### DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

**Please read the DEMO BOARD manual prior to handling the product.** Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
