LX1918 EVALUATION HOOK UP

The following is a demonstration scenario to be used for evaluating the LX1918.

HOOK UP DIRECTION

1. Place Mode Jumper in HI EFF (high efficiency) position.

2. Place E/S Jumper in ENOSC position.
3. Apply 3.6V / 2A input between VIN and GND.
4. Connect to Load capable of handling the prescribed output (Board is set to 1.5V output by default).

CONNECTIONS

The LX1918 Evaluation board has 4 test lead attachment points for applying power and control signals and for monitoring voltages. There are also 2 – 3 pin connections to select external synchronization

and operating mode. The E/S selector also has shutdown capability

Function	Board Label	Connection
Input Power	VIN	Power Supply (2.70V \pm 6.0V)
Power Ground	GND	Common Power Supply Ground
External Sync / Shutdown	E/S	Connect to GND to disable LX1918. A PWM > 500KHz logic PWM signal can also be applied ¹ .
Output Voltage	VOUT	Test Point – Hook up load and monitor VOUT
Mode Select	Mode	High Efficiency = Pin 2 and 3. Low EMI = Pin 1 and 2.

1 – To use external synchronization feature the Mode Select must be in Lo EMI position.
